

As a professional truck driver, I have to say that satellite radio is a godsend for me as I never get to listen to any one station for very long. But now with satellite radio I can listen to the same station from coast to coast. The weather and traffic are especially useful to me as they warn me about bad weather or accidents that may slow me down or make me late getting to my destination. Please do not let the NAB take away this useful tool from me and truck drivers nationwide.
